

Where n = 1 to 10

DESCRIPTION

BMI-3000 GEL is a bismaleimide oligomer that exhibits excellent flexibility and, on cure, forms very tough, hydrophobic polyimides. The material has excellent hydrolytic stability and thermal stability. As an additive it can improve rheological properties by increasing the thixotropic properties of a liquid monomer composition. This feature in turn can help to reduce resin bleed out on a variety of surfaces. It is soluble in most aromatic and aliphatic solvents such as toluene, nmp, etc. **BMI-3000 GEL** is compatible with and can be incorporated directly into many resin systems for enhanced performance.

HIGHLIGHTS

- Toughener
- Hydrophobic
- High adhesion to various substrates
- Superior thermal stability

TYPICAL PHYSICAL AND CHEMICAL PROPERTIES

| PROPERTY | METHOD | RESULT |
|--------------------------------|--------|------------------|
| Appearance at Room Temperature | Visual | Red-amber gel |
| Functionality | | 2 |
| Molecular Weight (approx.) | | 3,000 daltons |
| Weight Loss @ 300°C | TGA | < 1.0.% |
| Melting Point (typical) | DSC | 80°C |
| Decomposition Temperature | TGA | > 400°C |
| Recommended Storage Temp | | Room Temperature |

Data is for reference only and may vary depending on testing method used. The structure shown above is an idealized representation of a statistical distribution.

RECOMMENDED FORMULATION USE:

BMI-3000 GEL is recommended for use as an additive to increase flexibility, hydrophobicity and thixotropy. It has excellent adhesion to a variety of substrates. When used as a base resin, it can produce films that are tough, flexible and demonstrate good peel strength.
